NERSC Overview

**Harvey Wasserman**
User Services Group

July 15, 2014

NERSC

- **National Energy Research Scientific Computing Center**
  - Established 1974, first unclassified supercomputer center
  - Original mission: to enable computational science as a complement to magnetically controlled plasma experiment
- Today's mission: *Accelerate scientific discovery at the DOE Office of Science through high performance computing and extreme data analysis*
- A national user facility

NeRSC

2013 Annual Report

National Energy Research Scientific Computing Center

U.S. DEPARTMENT OF ENERGY | Office of Science

BERKELEY LAB
Lawrence Berkeley National Laboratory

Today's Talk

- **A brief introduction to the Center and some simple rules for getting work done at NERSC.**
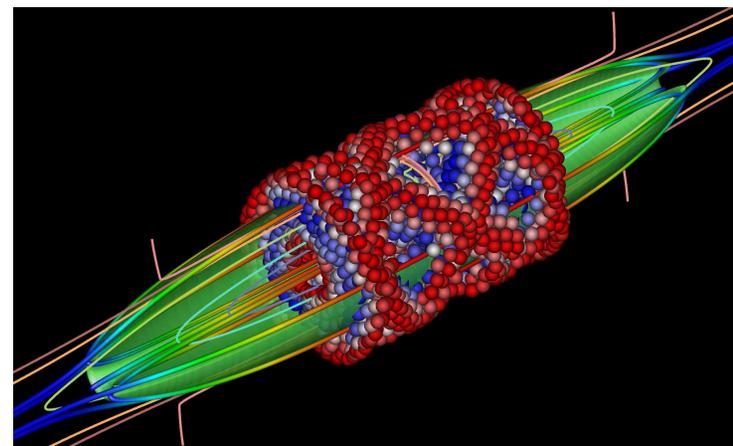

Trajectory of an energetic ion in a Field Reverse Configuration (FRC) magnetic field. Magnetic separatrix denoted by green surface. Spheres are colored by azimuthal velocity. Image courtesy of Charlson Kim, U. of Washington; NERSC repos m487, mp21, m1552

You Are Not Alone !
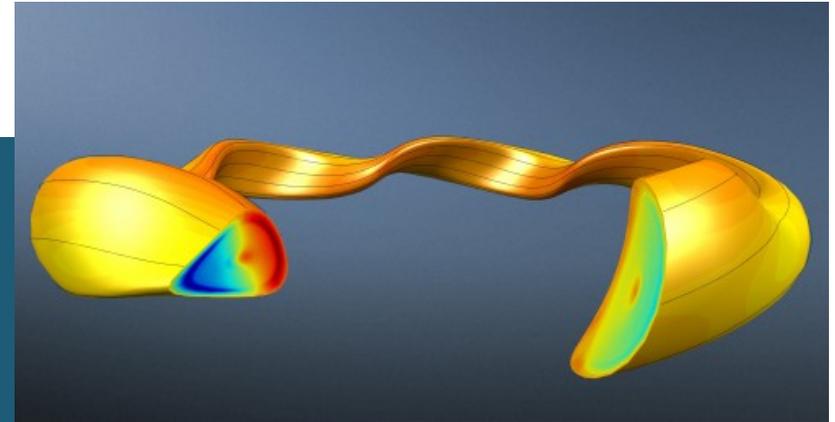

A calculation of the self-generated plasma current in the W7-X reactor, performed using the SFINCS code on Edison. The colors represent the amount of electric current along the magnetic field, and the black lines show magnetic field lines. Image: Matt Landreman

- **Diverse workload:**
  - 4,500 users, 700+ projects
  - 700 codes; 100s of users daily

- **Allocations controlled primarily by DOE**
  - 80% DOE Annual Production awards (ERCAP):
    - From 10K hour to ~10M hour
    - Proposal-based; DOE chooses
  - 10% DOE ASCR Leadership Computing Challenge
  - 10% NERSC reserve ("NISE")
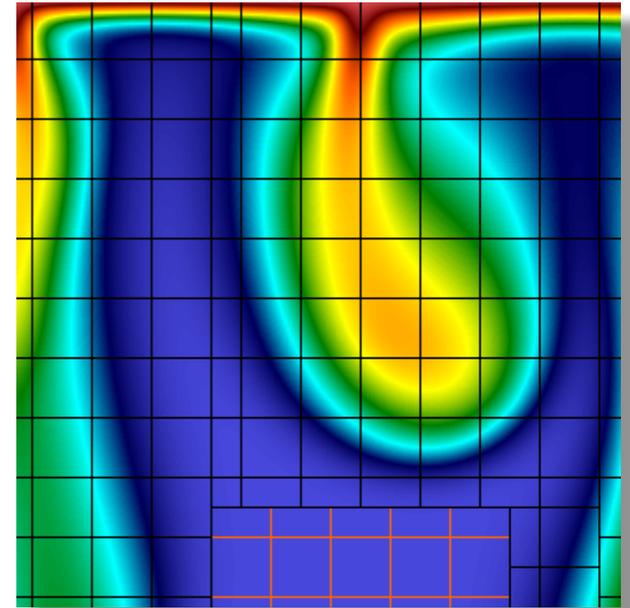

Simulation of density-driven flow for CO_2 storage in saline aquifers. Shown is a snapshot of the CO_2 concentration after onset of convection overlayed on the AMR grid. Image courtesy of George Pau and John Bell (LBNL). Repo mp111

NERSC Users Report ~1,500 Publications / Year

- **Make sure you acknowledge NERSC in publications; please use "official" acknowledgement**
- https://www.nersc.gov/users/accounts/user-accounts/acknowledge-nersc/

- *This research used resources of the National Energy Research Scientific Computing Center, which is supported by the Office of Science of the U.S. Department of Energy under Contract No. DE-AC02-05CH11231.*

- **Science highlights sent to DOE each quarter.**
  - Send us links to your publications.

NERSC Systems Today

Edison: 2.39PF, 333 TB RAM

Cray XC30 5,192 nodes, 125K Cores

7.6 PB Local Scratch 163 GB/s

16 x FDR IB

80 GB/s

Global Scratch **3.6 PB**

50 GB/s

/project **5 PB**

Hopper: 1.3PF, 212 TB RAM

Cray XE6 6,384 nodes 150K Cores

2.2 PB Local Scratch 70 GB/s

16 x QDR IB

5 GB/s

/home **250 TB**

12 GB/s

HPSS

50 PB stored, 240 PB capacity, 20 years of community data

Production Clusters
Carver, PDSF, JGI, Matcomp, Planck

Ethernet & IB Fabric
Science Friendly Security
Production Monitoring
Power Efficiency
WAN

2 x 10 Gb

1 x 100 Gb

Software Defined Networking

ESnet
Energy Sciences Network

Vis & Analytics   Data Transfer Nodes
Adv. Arch. Testbeds   Science Gateways

System Choices

- **Edison: fastest processors; fastest interconnect; best for scaling to large core counts; higher NERSC machine charging factor**

- **Hopper: previous generation processors; excellent scalability; lower charge factor**

- **Carver: compute nodes have more generic linux; current serial queue**
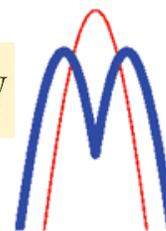

Simple Rules for Success

- Use our web site; use "Search…"
- Cray systems are not "typical" clusters, pay attention to differences
- Be kind to your neighbor users
- Back your stuff up
- Pick the right resource for your job and your data
- Use batch system effectively; pay attention to system-specific syntax and policies
- Use your allocation smartly
- Pay attention to security

Chemistry & Materials Applications

- **NERSC compiles and supports many software packages for our users.**

- *More than 13.5 million lines of source code Compiled, Optimized, and Tested*
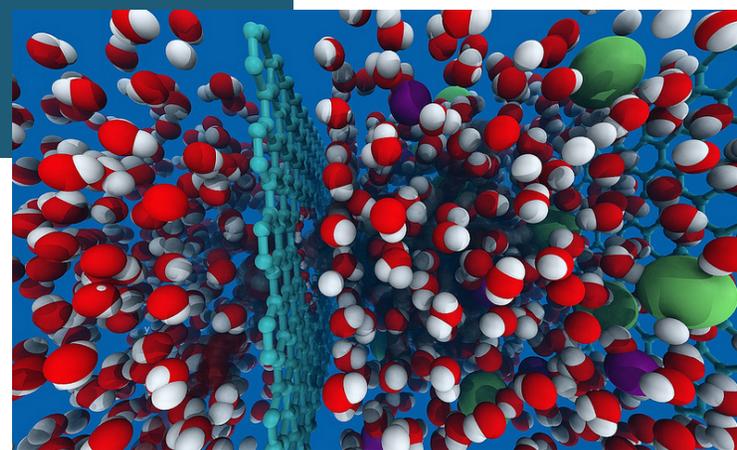

NERSC User's Group

- Get involved. Make NUG work for you.

- Provide advice, feedback – we listen.

- Monthly teleconferences with NERSC, usually the last Thursday of the month, 11:00 AM to noon Pacific Time.

- Executive Committee - three representatives from each office and three members-at-large.

- Community!

Rule # 4: Expect Consistency. And Change.

Molecular Dynamics simulation snapshot showing water molecules (red and white), and sodium, chloride ions (green and purple) encountering a sheet of graphene (pale blue, center) perforated by holes of the right size, with water passing through (left side), but sodium and chloride being blocked.

NERSC Roadmap
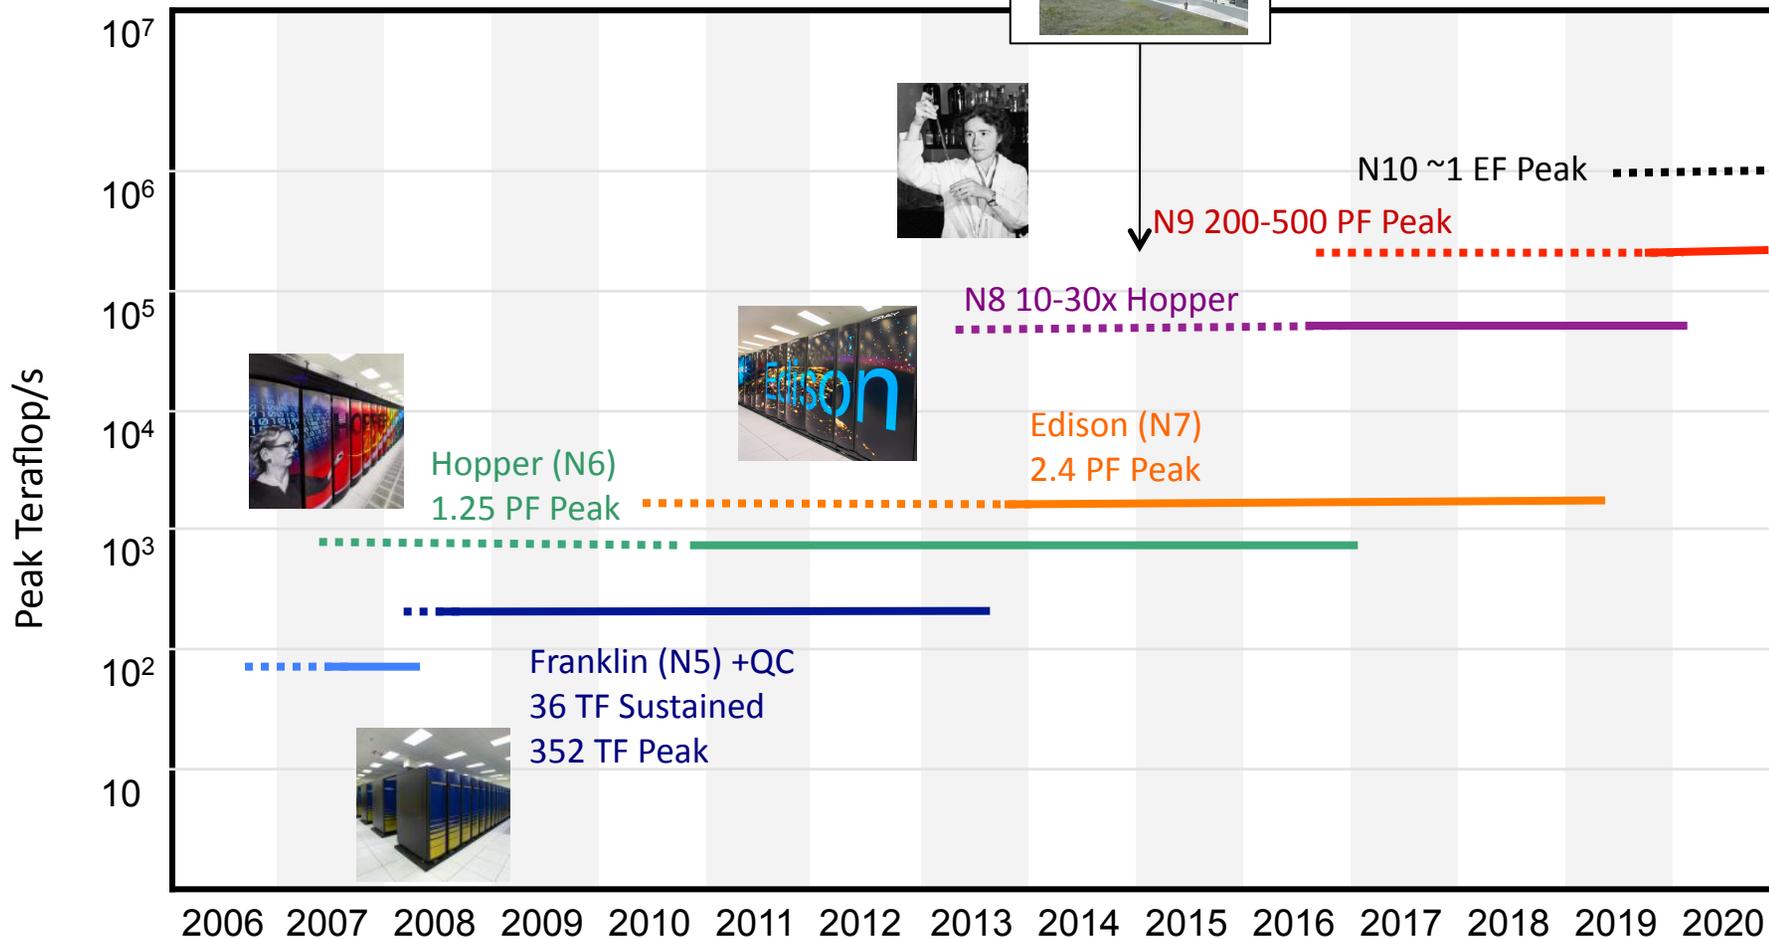

Change and Consistency

- **NERSC will be physically moving to a new facility in 2015.**

- **Carver will be "retired" August 31, 2015.**

- **NERSC-8 will be installed; Disruptive change: codes will likely run but will need to be modified to achieve good performance**

  - NERSC will help users make this transition.

- **Edison will remain available for codes that cannot transition to NERSC-8**

Thank you and welcome to NERSC!

Generic Multiprocessor Architecture
